# Buy Talaria Sting MX4 Online In USA

~~$4,500.00~~ **$3,499.00**

The Talaria STING MX4 is one of the newest Electric Dirt Bikes on the market. We sell the Talaria in the street version equipped with headlight, taillight, blinkers, reflectors, and larger upgraded display. It has many similarities with its older brother the Sur Ron, but it also excels in many fields that the Sur Ron lacks. The Talaria is larger with increased wheel base and clearance, it also features upgraded throttle for better response and new display. Experience the instant power and torque of this high powered ebike in any situation. Silently cruise down city streets, up rocky mountain slopes, or over jumps with the Talaria STING. Note: This bike comes in only one color, all black with gold decals.

# Description

Talaria Sting MX4
Product Features

8000W 60V high torque motor
Top speed of 53 mph
75 mile range
45AH LG Cells Lithium Battery
12Ah-110V/220V charger
Torque of 720nm
2.5-3.5 hour recharge time
Comes equipped with light kit (Front LED, rear brake light, blinkers, and reflectiors
Titanium gold four piston brakes
223mm Upgraded Brake Rotors
FREE SHIPPING

The Talaria STING MX4 electric dirt bike was made to bring cutting edge performance to all types of riders. This is the newest version of the Sting and offers upgrades on all sides, regenerative braking, larger motor, completely redesigned frame, and much more. It features a CAD designed light weight frame, a powerful 8000W electric motor delivering instant torque that is transferred through an intelligent gear drive that is next too silent. The STING is very easy to maneuver due to a compact well-balanced structure, and requires minimal maintenance. All these features make STING an ideal off-road bike that everyone can enjoy and ride with ease.

So whats new?

30% more power
45Ah Battery
Upgraded IPM motor
Gearbox mount
Front Fork
Rear Shock
Larger 220mm brake rotors
Rotor Guard
Peg Brace

Chain
Riser Bars
120a Breaker
Warranty Information:

For 30 days after the delivery date we can replace any part that is deemed defective from manufacturing.

The power system (motor, controller, display and battery) has a 12 month limited warranty. Chassis, swing arm and other none wear part have a 12 months warranty.

We do have exclusions for normal wear components (such as bearings, seals, chain, brake components, suspension valving), as well as misuse or failure caused by damages due to accident, collisions, or neglect. Misuse also includes altering any wiring, or installing any non-genuine parts, as well as any use for racing. Any misuse in charging, storing, or discharging will void this limited warranty. Limited warranty are non-transferable and you must have proof of purchase from us before asking for warranty replacement.

Gearbox requires an oil change every 600 miles

The combination powertrain design is perfect for the light weight electric MX bike. The high efficiency brushless permanent magnet synchronous mid-drive motor is built with top rated magnet material and advanced processing. DC IPM (Interior Permanent Magnet) Improved Motor. The motor is able to output 45N.M peak torque, as well as to have 284N.m peak torque to the rear wheel.
One of the recent innovations the Talaria STING sports is omitting the drive belt to the drive chain. In place of the belt there is a direct gearbox that connects the electric motor to the drive chain. With exquisitely crafted high accuracy gears, the gearbox runs even quieter and is more durable than any belt drive systems. It's time to say goodbye to that broken belt anxiety.
With an all new frame that is purpose built for maneuverability, light weight and compact. This frame uses 6061 aluminum alloy, and a forging process by 6000 tons of pressure for high tensile strength. The bike is guaranteed to give you a safe, fun, and fearless riding experience through even the toughest terrains.
The dash features a high-contrast OLED display, this offers riders a clear picture of data display with low power consumption. The dash uses CAN communication in order to transfer data with the battery pack's BMS and the motor controller. The display menu provides a range of information, which includes top/average speed, range, battery data, riding mode, error codes, regen level and more. The dash is also adjustableto allow different settings for different wheel size, sprocket size, motor regen levels, and change between KM/H and MPH to enhance the

compatibility of the bike.

The STING has an upgraded throttle design that protects the core parts of the throttle so even if the throttle tube suffers impact damage, the throttle can still be used.

The Sting's primary drive uses a small ratio gearbox rather than the drive belt found on the Sur-Ron. The belt drive is a service item which wears out over time and is vulnerable to damage from stones, grit and jumps. The Sting's ratio ratio box is designed to last the life of the bike and only needs an oil change every 600 miles. A drive belt change will typically cost around $113 whereas an oil change on the Sting should cost around $28.

DNM rear suspension featuring a multi-link structure. Progressive magnification for varied styles of riding. Light weight DNM inverted front fork.

2.5-3.5 hour recharge time

The STING is powered by an impressive 60V 45Ah lithium-ion power pack, which is capable of 2280 watt-hours, and is easily interchangeable. This has been improved offering best-in-class range and battery life. The power packs can be exchanged with another fully charged power pack in seconds for extended range. The LG 21700 lithium-ion battery is programmed with BMS, and optimized internal structure.

The controller is the brain of the Talaria STING. It has been upgraded for impact resistance, anti – interference, high-precision EABS voltage and discharge current control, error inspection, high and low temperature protection, anti-runaway, and smart energy regeneration. This brings the rider a powerful, exciting, and safe riding experience with longevity in mind.

Note: Many of our customers like all black so we included pictures of what that may look like if you choose got remove your decals.

Dimensions & Weight

Length: 74.01in
Width: 30.31in
Hight: 42.83in
